

MM31® – the pretreatment product in-depth from AD Chemicals

Van Meer R.

AD Chemicals, Business Unit Manager, Heijningen, The Netherlands,

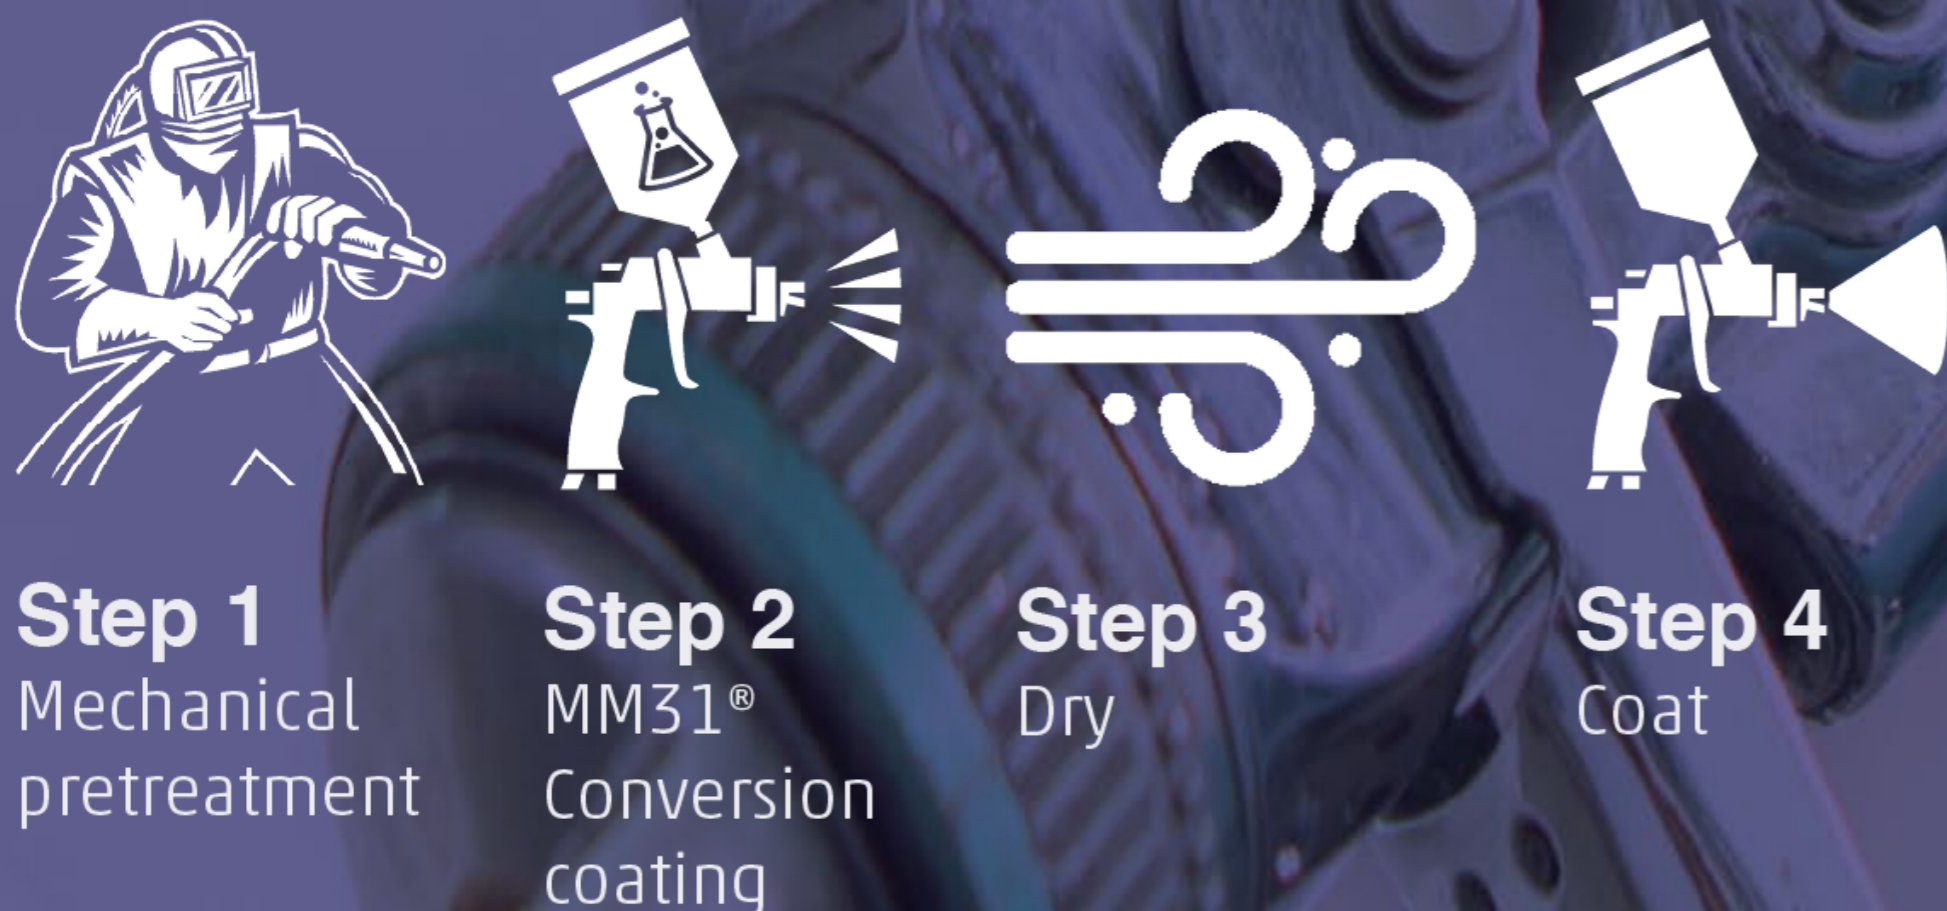

| Cleaning, degreasing, corrosion protection & paint adhesion in 1 simple step

MM31® is an innovative chemical pre-treatment from AD Chemicals. The product combines the worlds of mechanical and chemical pre-treatment.

“Tested with all major global paint suppliers”

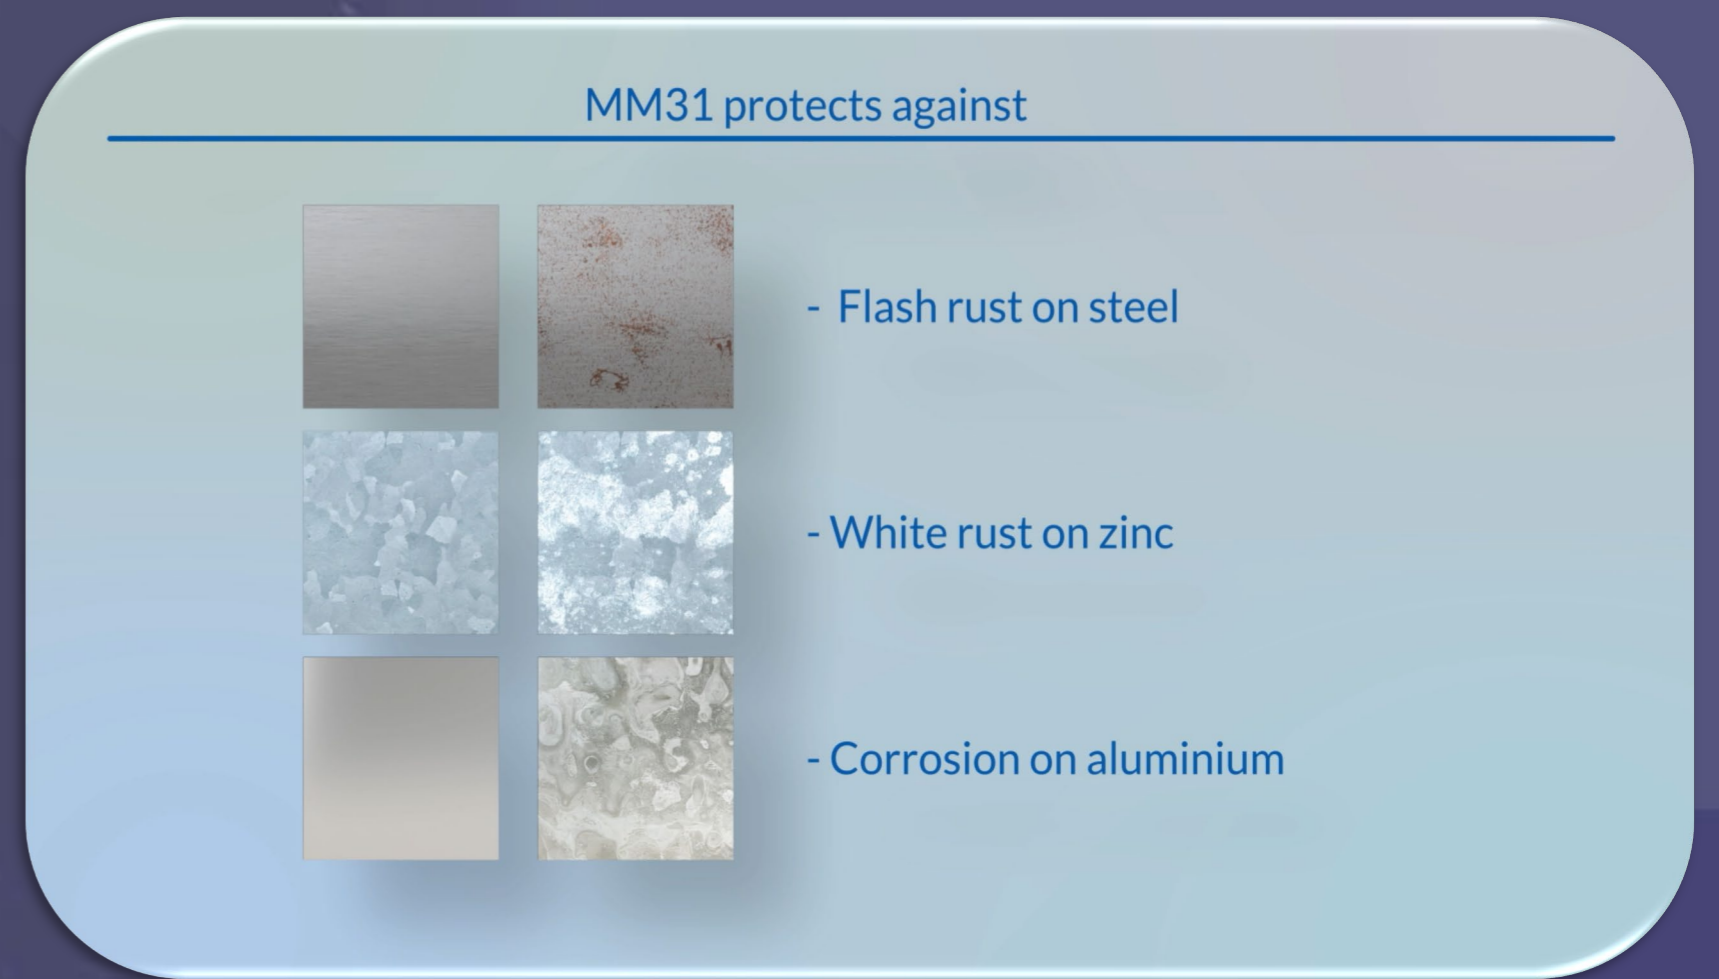

| Simple process

Applied in one easy process step by, for example, a lint-free cloth, manual spray gun with top cup or automatic paint system. The product can be applied on steel, galvanized steel, aluminium, magnesium and stainless steel, amongst others.

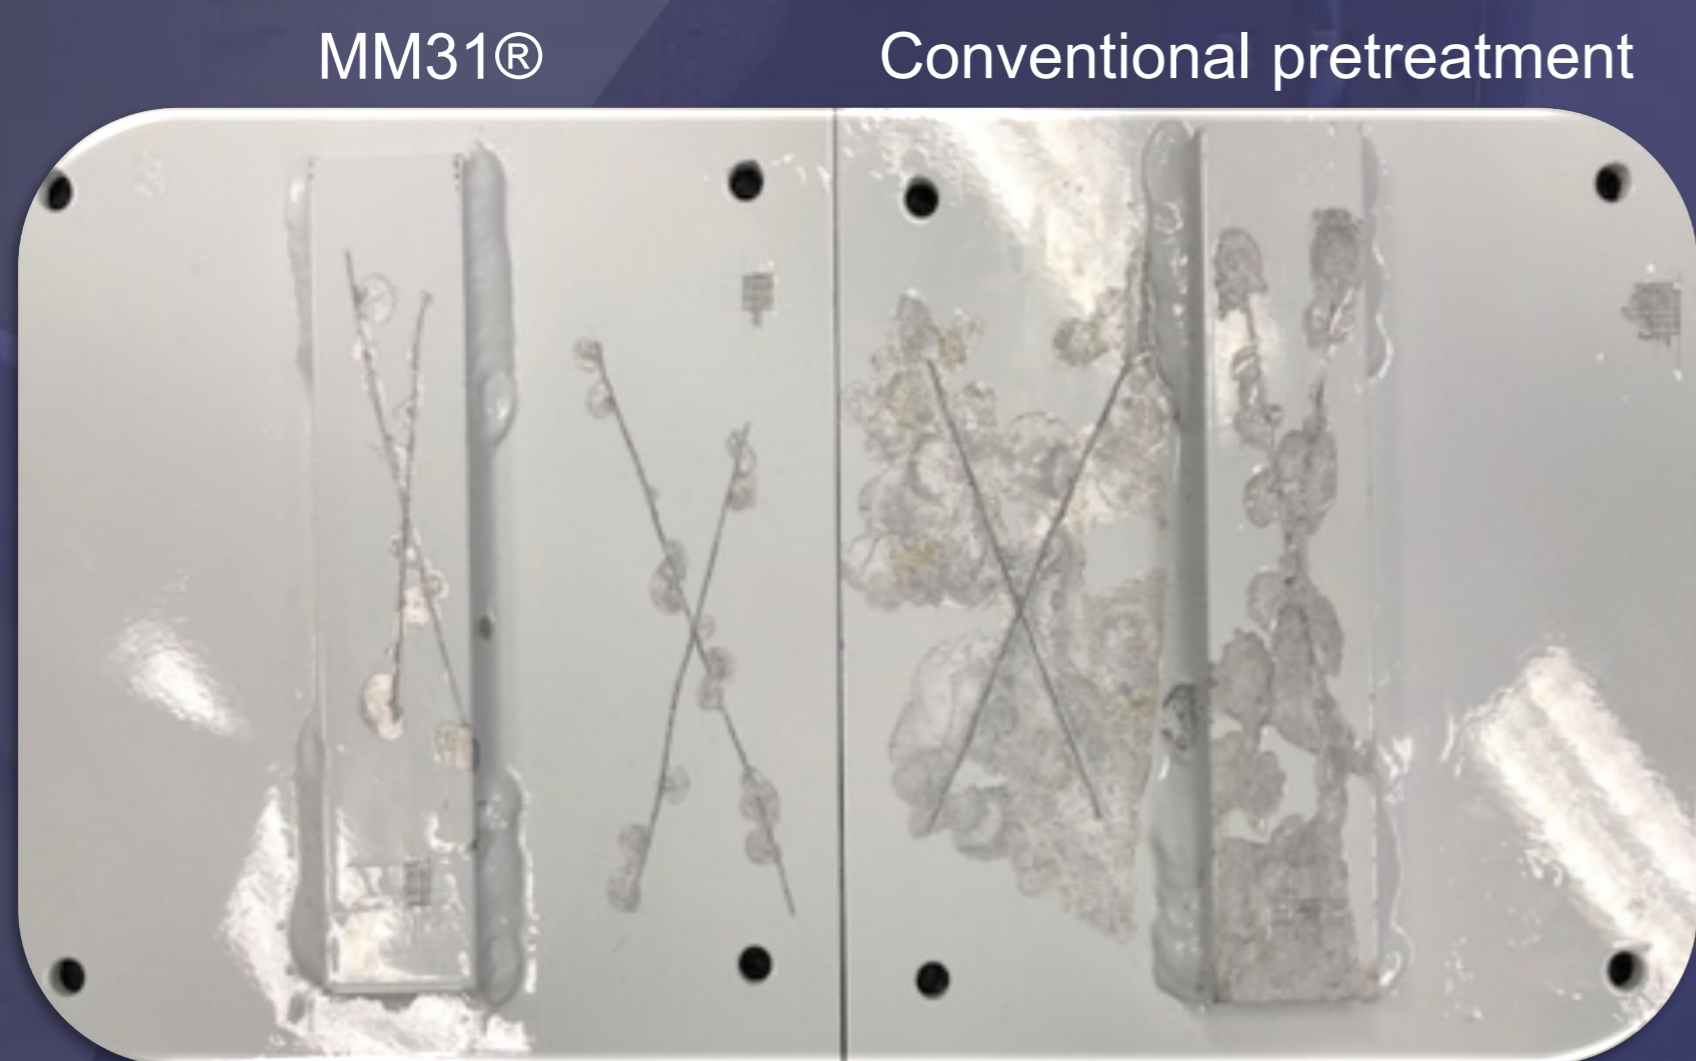

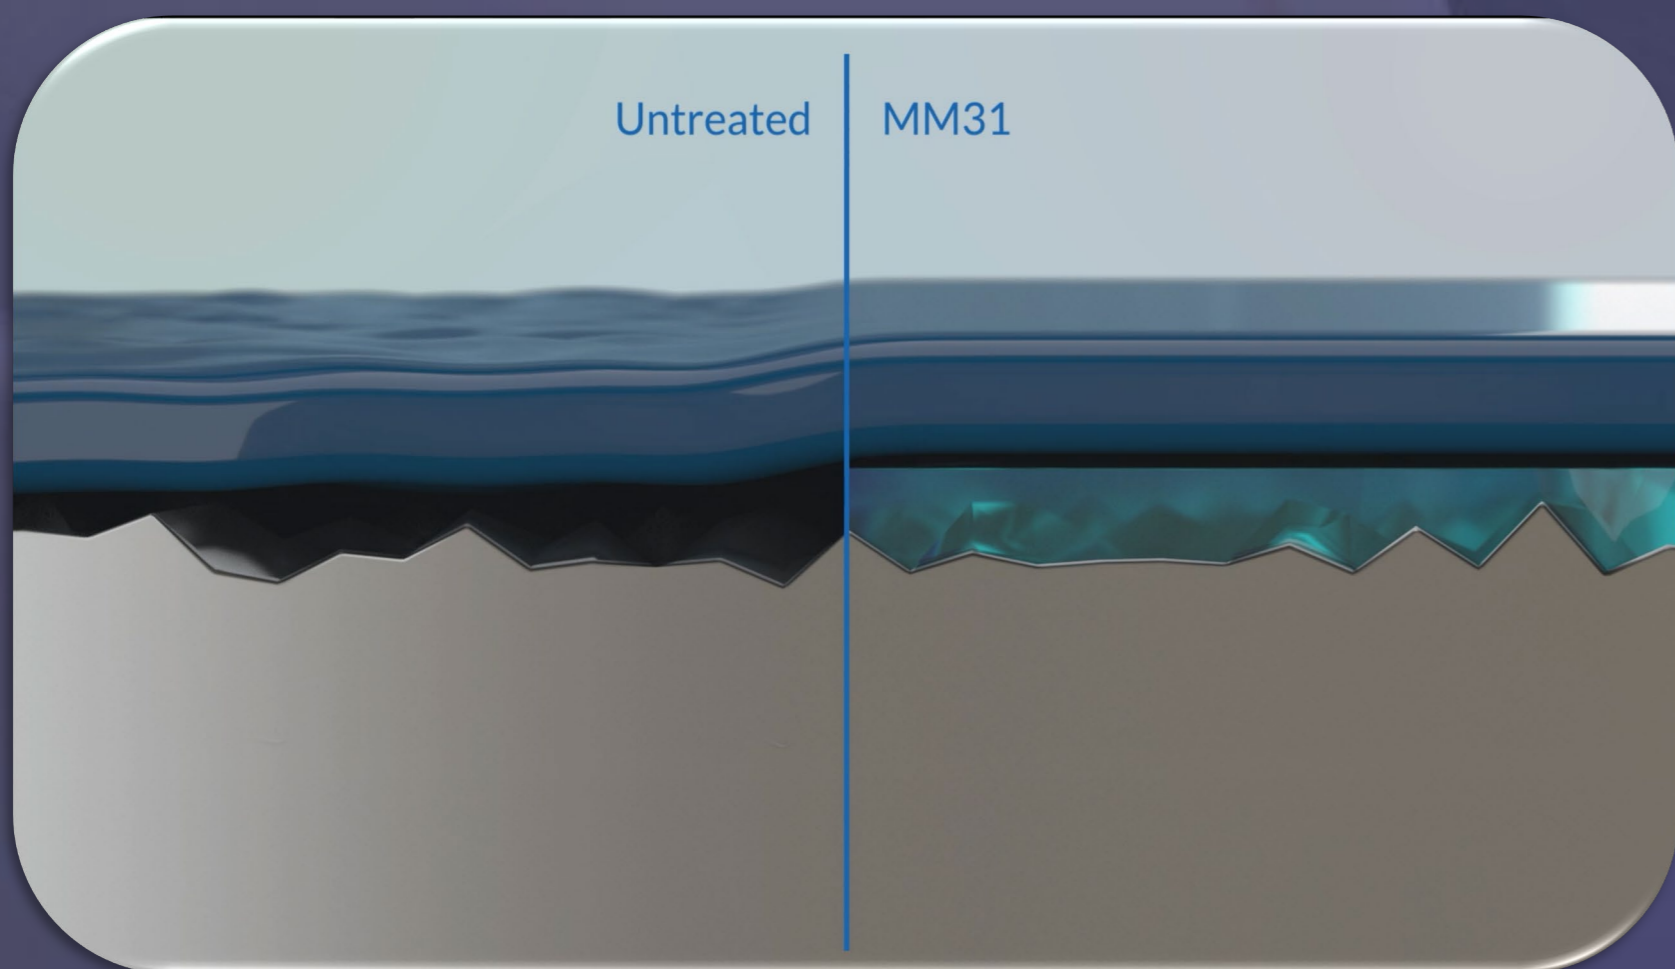

| Enhanced flash rust, corrosion & white rust protection

MM31® is a waterbased product which protects against flash rust on steel, white rust on zinc and corrosion on aluminium. MM31®, when applied, leaves an even coat on metal surfaces.

"The MM31® process can be fully automated"

Aluminium | PU Primer | 1000 h AAST

MM31®

| The benefits of MM31®

- ✓ Less production costs + extended storage period
- ✓ Waterbased and free of Hazard Symbols
- ✓ 1 product for cleaning/degreasing & application
- ✓ For steel, galvanized steel, aluminum, magnesium and stainless steel
- ✓ Conversion layer with improved adhesion
